

JARFALLA TELLER SCANNER

Jarfalla Teller Scanner CRS 201 is a cheque reader scanner for bank teller applications. The machine has a large number of features which makes it ideal for this application. CRS 201 is small and compact, it has a drop document feeding function, it can stamp the cheque on the front side and print an information line on the back side of the cheque.

The CRS201 Reader Scanner reads the codeline, MICR, E13B/CMC7, and optical, and scans the two sides of the cheque. The pictures are transferred to the computer in a format requested by the user. The cheque can be transported forward or backward, which means that reading can be done before stamping as verification. The machine reads the code-line, verifies the codeline and if ok moves the cheque backward to be stamped. The same facility is valid for printing on the backside of the cheque.

CRS 201 is interfaced via USB, available as a standard on most of the computers today. A complete API, with DLLs and detailed documentation for application development, goes with the machine.

Technical specifications

Feeder	Manual drop document feeding
Reading	MICR E13B, CMC 7 and OCR A/B
Scanning	Two sides. Resolution 100 or 200 dpi with 256 shades of gray
Transport speed	800 mm/sec
Document size	Length 105 - 240 mm Height 60 - 108 mm
Paper weight	70 - 120 g/m ²
Interface	USB
Power Supply	By power adapter 110/240 VAC 50/60 Hz 50VA
Dimensions	Length 240 mm Height 130 mm Width 200 mm
Homologations	CE Safety EN 60950
Options	Removable collecting bins for processed cheques Magnetic card reader tracks 2 & 3 Colour scanning
